

HIGH-PRESSURE JACKETED PIPE

SVI is a Charlotte-based fabrication and turn-around company with over 25 years of experience in pipe fabrication and valve repair. We bring excellent project management, superior workmanship, and tractability to every project. Our ability to add value engineering to any jacketed pipe project always saves our customers on Capital and Maintenance costs making us the leader in designing and fabricating high-pressure, high-integrity jacketed piping systems. The focus of SVI has always been to offer our customers top-quality service backed with unparalleled response time.

High-Pressure, High-Integrity (polymer) jacketed pipe is used around the world. The level of detail required to make this type of piping systems is rare in the pipe fabrication industry. SVI prides itself on having the experience and expertise to fabricate these specialized spools. We guide our customers in details such as using hub-type (GrayLoc*) connectors with clamps for pipe-to-pipe connections or high pressure Class 1500 or 2500 lb. flanges. While designing these spools, we understand that every detail matters to ensure your process conditions are met and your plant remains operational.

Our people make the difference at SVI:
Over 500 combined years of experience fabricating high-pressure piping.

- One of the lowest EMR rates in the industry
- Five service locations in the Southeast
- 2 Year Warranty on craftsmanship

Capabilities

SVI maintains several certifications for both shop fabrication and field services:

- S Stamp
- U Stamp
- R Stamp for Boilers & Pressure Vessels
- VR certification – ASME section I & VIII for field and shop
